INTRODUCTION

Thank you for purchasing ParaGrafix's button label decals for the EVA Pod kit from Moebius Models®.

Materials

In addition to the decals, you will also need sharp scissors or a knife to remove individual pieces from the main sheet.

Decals

Please see the enclosed decal instructions for the manufacturer's application recommendations.

Note that these decals can be applied before or after the kit supplied decals and are fully compatible with ParaGrafix's EVA Pod photoetch and display screen sets. Photoetch and display screens are sold separately.

Painting

All parts should be masked and painted before applying the decals. Please note that the buttons in the photographs are marked out in the color that they should be painted – we suggest Tamiya clear paints, though feel free to use your favorite. You will need the following colors:

Blue: Tamiya X-23 (bottle), TS-72 (spray)

Yellow: Tamiya X-24 (bottle), PS-42 (spray – note that this paint is intended for polycarbonate car bodies. We make no guarantee that it will work with polystyrene.)

Green: Tamiya X-25 (bottle), TS-20 (spray)

Red: Tamiya X-27 (bottle), TS-74 (spray)

Installation Parts Order

The installation steps are not in any particular order. You can complete them as you see fit to complement your kit construction order.

Many thanks to Moebius Models® for providing a preproduction copy of the EVA Pod kit so that we could develop this photoetch set.

Special thanks to Adam Johnson both for his 2001: The Lost Science books, which were a wealth of fantastic references, and for his kindly sharing information not covered in them.
